Technologies Use

UI/UX team are using technologies such as Figma, Slack and Phrase. Android developer are using Android Studio, Google Play Console, FIgma, Postman and Jira. For IOS developer they are using native IOS using Swift language. For web developer, they are using Vue.js, Tailwinds, PrimeVue, PrimeFlex and Php while API developer using Laravel, Sourcetree, Sequel Ace and Postman. Lastly, quality assurance department are using Jira for automation run testing.

Career

Clarity Techworks introduces us with six different positions in their company that related to IT. They have UI & UX designer which responsible to do research of the requirements from the product manager and design the application. Then, they will pass the tasks to Android, IOS and web developers. Each of the department are responsible to develop functionality as the UI/UX team have designed. The different between them is the application used for completing their tasks. API team will produce API for internal and external use, provide solutions for backend problems & manage database. Lastly, quality assurance team will do test running for every functionality and every page of web and mobile applications. They will provide details for development team if there are problems during the testing and prepare report.

Reflection

This industrial visit has given me exposure to the real IT industry oIt has indirectly enhanced my interest in this field. In addition to observing the workflow in the IT department, I have also been exposed to various technologies. This experience is an advantage as I prepare for the future.
